Machine learning Wikipedia

January 13th, 2019 - Machine learning ML is the scientific study of algorithms and statistical models that computer systems use to progressively improve their performance on a specific task Machine learning algorithms build a mathematical model of sample data known as training data in order to make predictions or decisions without being explicitly programmed to perform the task

Artificial neural network Wikipedia

January 15th, 2019 - History Warren McCulloch and Walter Pitts 1943 created a computational model for neural networks based on mathematics and algorithms called threshold logic This model paved the way for neural network research to split into two approaches One approach focused on biological processes in the brain while the other focused on the application of neural networks to artificial intelligence

Course Description – 2nd International Summer School on

January 16th, 2019 - Summary In many fields today multiple sets of data are readily available These might either refer to multimodal data where information about a given phenomenon is obtained through different types of acquisition techniques or multiset data where the datasets are all of the same type but might be acquired from different subjects at different time points or under different conditions
